

DMCA report: <https://aur.archlinux.org/packages/maigret>

Hello representatives of the Arch distribution. The AUR repository hosts pirated software: the '[maigret](#)' package.

Maigret violated the copyright of the [Snoop Project](#).

The 'Maigret' project is a violation of the Snoop Project copyright (illegal use of the Snoop database in Maigret, violation of the [Snoop Project license](#), circumvention of technical protection and misappropriation of materials, the MIT license is invalid and false, as it contains the proprietary code of the Snoop Project database).

Please note that <https://github.com/soxoj/maigret> was blocked on a number of resources for this complaint (Google; Gitlab) for piracy.

Here's the proof:

<https://github.com/jivoi/awesome-osint/issues/201>

I am the developer of the Snoop Project which was completely scammed by the 'Maigret' project.

I request you to check the evidence and remove the pirated tool „[maigret](#)“ from the AUR platform.

I am fully aware of the responsibility for my words and confirm that my words are true.

I duplicate this letter in pdf, signed with my developer's electronic signature (the public key for verifying the signature is in the repository or in an open key database

<https://github.com/snooppr/snoop/blob/master/PublicKey.asc>).

Applicant: Kurnikov D.G. date 6 Jan 2024.
